

1                                   **ABSTRACT OF THE DISCLOSURE**

2           An apparatus and method and system for enabling data  
3 transmission by a wireless device through a personal  
4 computer. A wireless device, comprising a first data  
5 link port and a data terminal equipment, and a personal  
6 computer, comprising a second Internet access port, a  
7 second data link port, and a packet router, are provided.  
8 The personal computer connects to the wireless device via  
9 a medium, and the personal computer transmits data  
10 packets, received from the Internet, through the second  
11 Internet access port to the data terminal equipment via  
12 the medium using the packet router.
